Notes:

SL

====

6 Double galaxy. Inside NGC 1641 (loose asterism).
16 Misidentified on HW atlas chart 19V.
20 Asterism of 4 stars, mags. 10.39V, 10.80V, 11.6 and 12.8.
23 = HS24. A fairly loose cluster of low surface brightness.
24 Misplotted in HW atlas. Too far north by 4'.
33 = LW56. Misidentified in HW atlas.
45 = NGC 1698. Potential for confusion, as coordinates of NGC 1698 are rather similar to nearby IC 2105, and original coordinates of SL45 place it too far S, near an anonymous emission nebula at 4:48:56 -69:09:39 (2000). I am satisfied that NGC1698 = SL45 at the tabulated position.
54 SL dec. in error; subtract 10'.
72 = LW87. SL dec. in error; subtract 10'. Too far S in HW atlas.
73 = LW86. SL dec. in error; subtract 10'. Too far S in HW atlas.
97 Nothing at SL position. HW id. used, 40s RA to east.
159 Asterism or doubtful cluster.
178 Not NGC1787. Star GSC 8889.00260 superimposed on NE quadrant.
182 Nothing detected at SL position.
185 = LW116 loose cluster. Identified on DSS image. HW position too far north. (LW118, compact cluster, lies 6' due S.)
199 Diameter given by SL is 410", which covers the whole complex NGC 1814/16/20 = LH19 (association).
211 Misidentified in HW atlas.
220 Asterism; 2 stars of which one may be a galaxy.
225 Not NGC1838, but lies within it.
263 Id. unclear. Revised position refers to a low surface brightness "cluster". Nothing at SL position (2000) 5:8:58 -66:46.3, or KMH position (2000) 5:8:32.1 -66:45:24.
279 Probably identical with HS149. SL position 4.4' out.
313 Not found. Possibly a duplication of SL302?
320 Seems to refer only to the grouping of stars in the western part of the complex i.e. NGC 1874, 1876 and 1877.
326 In, and part of NGC 1869.
359 Not NGC 1901.
408 LH44.
532 Essentially a single star, HDE 269662 = LMC V3068.
545 SL declination out by 10'.
610 Not NGC 2055, a star cloud just north of SL610.
681 Nothing found at SL position. Emission neb. Henize 71 lies about 4'due south. DSS image (red) shows 5 or 6 stars enmeshed in neb. Probable identification; new position taken from USNO-A2.0.
820 Nothing found. Probable duplication of SL 823. See SL823 notes.
823 = LW 362. Only one cluster found here on DSS image, contrary to SL cat. and HW atlas. SL823 (northern object) is the cluster, but is labelled 820 by mistake in HW atlas.
878 Nothing at SL position. Probably an asterism, 4' north.
